1.1 Purpose

During their university studies, in order to start entering the workforce, a student might decide to apply for an internship related to their field of study. Similarly, companies offering internships may be interested in finding students that are adequate for them. To facilitate the matching between students and companies, a new platform called *Students and Companies* (S&C) is to be developed. S&C allows companies to look for suitable students by publish internship advice on the platform, while students can look for internships that interest them. Moreover, the platform implements recommendation mechanism to help student and companies to find each other. Once the contact is established, S&C can provide support to the students selection process.

1.1.1 Goals

The main goals of the system are:

- [G1] students and companies establish contacts for doing internships;
- [G2] internships selections can be monitored and supported by the system;
- [G3] ongoing internships can be monitored from the system.

1.2 Scope

In this section, we are identifying the S&C domain. In particular, there are two main users categories that interact with the system: *Companies* and *Students*. The companies publish announcements about the internships they want to offer where they specify *projects* that will be carried out and the *terms* of the offer. The system itself informs the companies about the availability of students who may be suitable for their internships (based on their profile).

Students, on the other hand, may use the platform to look for internships and S&C can also notify them if there are new internships that could meet their interests, but they can still independently search through all the available internships.

Once a *contact* is established and accepted by the two parties, the student selection process begins. At this point the company defines selection steps and schedules the interviews for each student. Once the selection is over, the system collects feedback and suggestions from both students and companies.

Finally, both students and companies can monitor the progress of the internships by providing information on its development and any issues that may arise.

1.2.1 Phenomena

World Phenomena

Shared Phenomena

World-controlled Shared Phenomena

Machine-controlled Shared Phenomena

1.3 Definitions, Acronyms and Abbreviations

1.3.1 Definitions

- ▶ **internship advice** : a call for application related to an internship that will be offered by a company;
- ▶ **recommendation** : the mechanism related to the fact that the system both informs students whether new internship advice that might interest them are published and notifies companies of the presence of students that might be suitable for their internships;
- ▶ **project** (of an internship advice) : the definition of the application domain, the set of tasks to be performed and the set of the most relevant adopted technologies (if any) for an internship;
- ▶ **terms** (of an internship advice) : the set of benefits offered by an internship (e.g. paid/not paid, training, lunch voucher...);
- ▶ **selection process** : each internship advice is followed by a sequence of selection steps.

1.3.2 Acronyms

- ▶ S&C: Students&Companies, the name of the platform;
- ▶ UML: Unified Modeling Language;
- ▶ CV: Curriculum Vitae.

1.3.3 Abbreviations

- ▶ Gn: Goal number n;
- ▶ Rn: Requirement number n;
- ▶ Dn: Domain assumption number n;
- ▶ WPn: World Phenomena number n;
- ▶ SPn: Shared Phenomena number n;
- ▶ UC: Use Case.

1.4 Revision history

1.5 Reference documents

The Documents used to deliver the RASD document are the following:

- ▶ the Specification of RASD and DD assignment of Software Engineering 2;
- ▶ the class slides on WeBeep, in particular slides on RE (requirement engineering), scenarios and Use Cases and UML diagrams;

1.6 Document structure

1. **Introduction**: this section provides a brief introduction to the purpose of the platform to be developed, S&C in this case, focusing in particular on the most important goals which the system has to achieve and on the various phenomena identified;
2. **Overall Description** : an high-level (conceptual) description of the system functionalities explained through scenarios, high-level class diagram, product functions and domain assumption;
3. **Specified Requirements** : the detailed requirements analysis. In this section is detailed the entire requirement set (functional and non-functional), the most relevant use-cases (including sequence diagrams that formalize them) and the design constraints that must be stated also at the requirement level;

4. **Formal Analysis** : formal modeling and simulation of a simplified model of the system, in order to formally prove the correctness of the (possibly) foremost requirements (using Alloy 6);
5. **Effort Spent**: report of the time spent by any group member in any document section;
6. **References**: list of software and documents used to develop the document.

2.1 Product perspective

2.1.1 Scenarios

Student signs up to S&C

Student Bob enters in the system for the first time. On the homepage, he first clicks the *Registration button* and then the *Student Registration button*. To register, Bob fills out a form providing its institutional e-mail (bob.johnson@mail.polimi.it) and password (which will be used for future logins), a brief description of his academic background and specifies whether he would like to receive notifications from the system about future published internships. Finally, Bob uploads his CV by clicking the *Upload CV button*. Now Bob is registered and can search for internships that interest him.

Company signs up to S&C

The company FinestraMI enters the system for the first time. On the homepage, it first clicks the *Registration button* and then the *Company Registration button*. To register, the company fills out a form providing its name, a brief description of its area of expertise and its business area (the market where it operates) and finally its corporate e-mail (info@finestrami.it) and password (which will be used for future logins). FinestraMI also specifies, by selecting the appropriate option, whether it wants to be notified about the availability of students who may be of its interest. Now, FinestraMI is registered and can publish its internships advice.

Company publishes an internship offer

The company FinestraMI enters in the system; on the homepage, it clicks the *Login button*. Once logged in, FinestraMI accesses the *Publish New Internship section*. A new internship advice is added by filling out a form where the following information is provided:

- ▶ "Window restore" (the intership title);
- ▶ "The aim of this internship is to give to student to opportunity to repair office windows and..." (a brief description);
- ▶ "third year bachelor students..." (experience required);
- ▶ "not suffering from dizziness" (desired skills);
- ▶ "1. coordination of glass disposal; 2. ..." (main activities the internship involves);
- ▶ "no paid, canteen tickets available" (terms of the internship);
- ▶ "" (advice deadline).

Now the internship advice is visible to students registered on the platform (and also to FinestraMI).

Student proactively searches for an internship

Students Bob, Alice and Micheal access to the system by clicking "Login". Each one of them wants to find an internship to apply but each one of them has a different idea of what and where he/she would like to do/be:

- ▶ Bob is really interested on doing practice on an handwork but he neither knows a name of a company nor knows which kind of handwork apply for so, he goes to the *View Internships section*, where he can see all the published internships, listed from the most recent to the least recent. The most recent one is "Window restore" by FinestraMI, then he selects it;

- ▶ Alice has not already decided the kind of internship she wants to apply for but knows many names of companies that operate near her home and so she prefers to go to the *View Companies section*, where she can see all the registered companies and all the internships published by each company. Then she recognized FinestraMI and since she knows that it is expanding, she decides to select it. "Window restore" is the only available advice of FinestraMI but she select it anyways;
- ▶ Micheal is looking forward to do an internship related to windows restoration, so he uses the search bar to insert "windows restoration" and selects the option "only paid internships", but no internship are found. Then he removes the option and find the internship of FinestraMI. Since it is the only left, he selects it.

Student receive a notification about a new internship

The company Cancellami (previously registered to the platform) publishes a new internship related to railings maintenance then, Student Bob, who has chosen to be notified by the system when new internships that might be of interest are published, receives an email informing it that a new intership related to his studies is available, since it stated in his CV that after the internship at FinestraMI he became passionate of railings. Bob then logs into the platform and, by going to the *Notification section*, can view the internships offer in more detail.

Company receives a notification about new possibly interested students

Company FinestraMI, which has chosen to be notified by the system, receives an email informing it that new students are appealing for its intership "Window Restore" (based on their CVs). FinestraMI then logs into the platform, goes into the *Internship section*, clicks on *Windows restore internship* and by going to the *Notification section* can view the students' profiles and their CVs in more detail.

Student applies for an internship

Student Bob wants to apply for the internship "Windows restore". To do so, they log into the system, access the page for "Windows restore" internship and click the *Apply button*. Automatically, the system will send a notification to FinestraMI (the company offering the internship) to inform it that Bob has applied

The company accepts the application of a student

Company FinestraMI receives the email regarding student Bob's application for the internship "Window Restore". FinestraMI then logs into the platform, navigates to the *Internships section*, select the *Window Restore Internship*, goes to the *Notification section* and clicks the *Accept Application button* to approve Bob's application.

The company proposes to a student to apply for one of its internships

contenuto...

Student accepts an internship proposal

contenuto...

The application deadline expires and the selection process is configured

The administrator of the company FinestraMI notices that the application deadline for the internship advice "Window Restore" (which was previously published on the platform) is now expired and selection process for that internship has not configured yet, so he goes to the designated page and configures:

- ▶ two steps (the selection process will be made up of two steps);
- ▶ a set of metrics to evaluate students ("manual skills" and "knowledge of materials" in this case);
- ▶ each step is configured as a questionnaire with a series of questions for the students, in this case in particular:

1. first step is test of both open and closed questions regarding knowledge of materials. For closed questions, the platform is also able to automatically check if they are corrected or not (and so, for each closed question, also the scores to assign to each possible answer are inserted into the system). Open questions will be evaluated manually by the company;
 2. second step is an oral exam. Since there are no predefined questions for this step, the company only inserts into the system one open question called "oral exam", scores will be inserted by the company at the end of the exam.
- for each step and for each candidate, the company chooses also the date in which it provides the questionnaire to the candidate.

The selection process runs

For the internship advice "Window restore", the company FinestraMI received three applications: Bob, Alice and Micheal. FinestraMI is planning to accept only one student at time, therefore it chooses to first call Micheal for the first step, since his curriculum impressed more the company. On Micheal is called and the questionnaire is given to him. His answers are evaluated (automatically for the closed ones and manually for the opened ones) and gets an overall score of 99 out of 100: the company decides to select him, discards Bob's application and leaves suspended the call for Alice. The company sets for Bob and Micheal the right message and the platform notifies them.

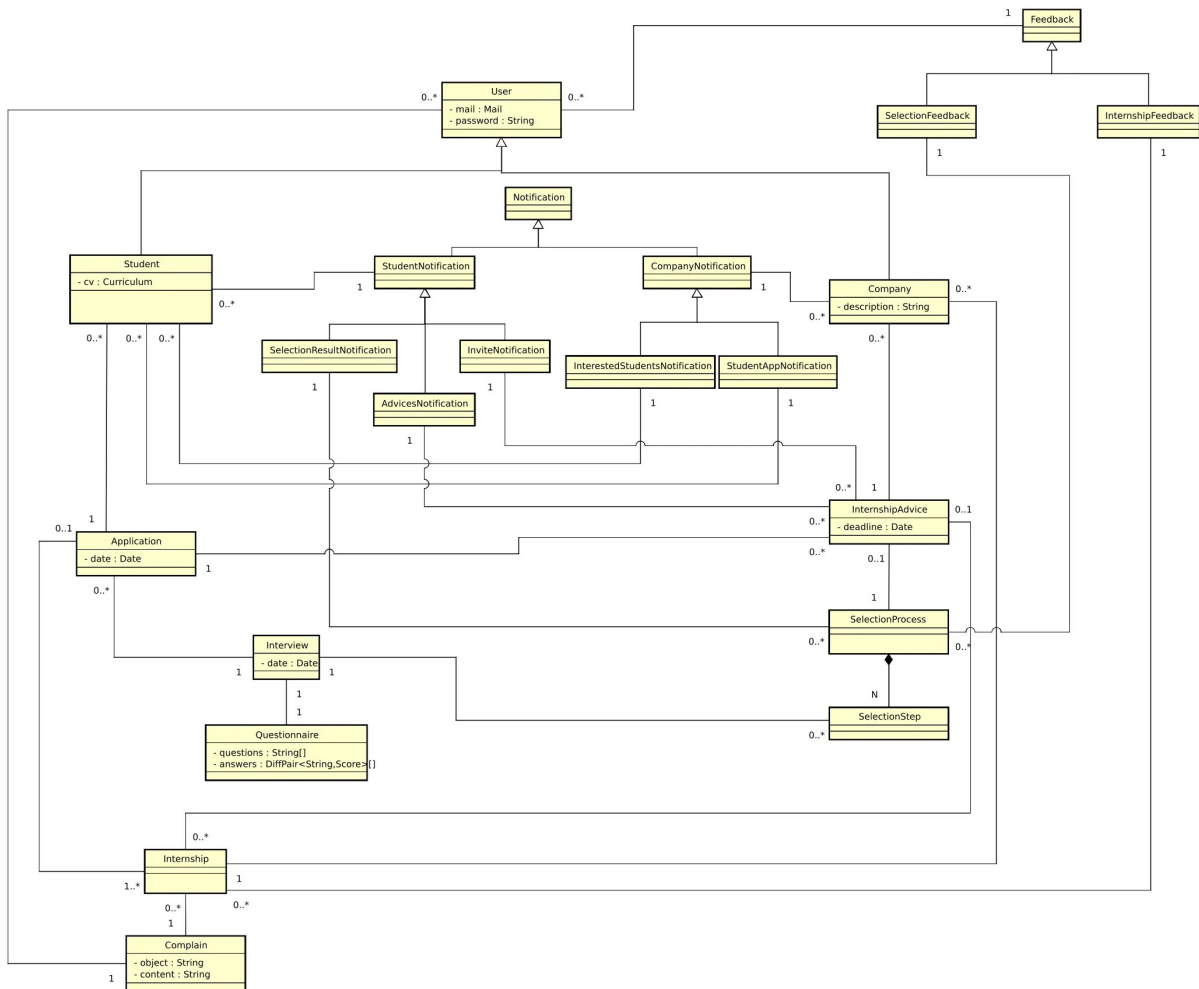

User provides a feedback at the end of the selection process

contenuto...

User reports a complaint on one of the internship is currently doing

Today, Alice who is currently enrolled in the internships at the company WeWorkGreat had a problem with the task that was given to her, she asks the helpdesk of the company where she is performing the internship and they ask her to upload a video on the company file sharing platform to show the situation. Alice notices that she can't upload the video because the maximum uploading size for students is to 10 MB, then she opens Students&Companies and writes a compliant that states that the file sharing system of WeWorkGreat is only of 10 MB.

2.1.2 High-level class diagram

This

is the entire high-level class diagram. Due to the fact that it is quite large, perhaps it is convenient to divide it into four parts:

- *application part*: USER is specialized into COMPANY (which publishes INTERNSHIPADVICE) and STUDENT (which applies for INTERNSHIPADVICE);
- *selection part*: each INTERNSHIPADVICE is related to SELECTIONPROCESS, which is made up of a number of SELECTIONSTEPS that actualize in INTERVIEWSS for the students currently enrolled in the selection process;
- *notification part*: both user categorizes may receive notifications, in particular:
 - SELECTIONRESULTNOTIFICATION: notifies to a STUDENT the result of a SELECTIONPROCESS it attended;
 - ADVICENOTIFICATION: notifies to a STUDENT that an INTERNSHIPADVICE that might interests it has just been published;
 - INVITENOTIFICATION: notifies to a STUDENT that a COMPANY invited it to apply for one of its INTERNSHIPADVICE;
 - INTERESTEDSTUDENTSNOTIFICATION: notifies to a COMPANY a list of STUDENTS that might be interested in applying to their INTERNSHIPADVICE;
 - STUDENTAPPNOTIFICATION: notifies to a COMPANY that a STUDENT applied for one of its INTERNSHIPADVICE;
- *feedback&complaints part*: USERS can upload FEEDBACKS and COMPLAINTS.

3.2.5 Requirements mapping

Table 3.1: Requirements mapping for goal G1

[G1] students and companies establish contacts for doing internships	
[R10101] the system allows students to sign up to the platform with their institutional mails	[D10101] students upload their CV in Europass format
[R10102] the system allows a student to set up whether he/she wants to be notified of the presence of internship advice that might interest him/her	[D10102] information on a student CV do not contradict each other
[R10103] the system allows students upload their CV to the platform	[D10302] information companies insert in internship advice do not contradict each other
[R10104] the system allows students to publish on their profile a brief description of themselves	
[R10201] the system allows companies to sign up to the platform with their company address	
[R10202] the system allows companies to insert the main information regarding their business area and area of expertise	
[R10203] the system allows a company to set up whether it wants to be notified of the presence of students that might be interested to its internship advice	
[R10301] the system allows companies to publish internship advice where they specify the main information regarding the internship (brief description, experience required, desired skills, main activities involved and the terms) and the submission deadline	
[R10401] the system allows students to search internships advice by name (and also to see the complete list of available advice). The system shall act as a search engine to present also the names of the advice that are similar to the searched one	
[R10402] the system allows students to search companies by name (and also to see the complete list of registered companies) and then access to their profile	
[R10403] the system allows students to filter the results they searched (e.g. "only paid internships", "only companies located in Lombardy")	
[R10501] when the system recognizes that a new internship advice that might interest a student (that allowed the notification option) is published it notifies that student by sending him an e-mail (to your address)	
[R10601] when the system recognizes that a student has a profile that would fit an internship advice, the company that published the advice is notified	
[R10602] when a company opens a student profile, it can propose to him to apply for one of its internships	
[R10701] the system allows students to apply for any internship advice which deadline has not expired	
[R10702] when a student applies for an internship, the related company is notified by the system	

Table 3.2: Requirements mapping for goal G2

[G2] internships selections can be monitored and supported by the system
[R20101] when the deadline for an internship advice is expired, the system allows the company to set up the selection process by specifying for each step, the relative questionnaire (with metrics for each question) and the date in which provide it to a student (dates may differ between different students) [R20201] the system automatically calculates the scores of questionnaire closed answers [R20202] the system allows companies to manually insert scores for questionnaire open answers [R20203] the system allows companies to visualize and compare selections scores [R20204] in any selection phase, the system allows companies to discard a student currently involved in the selection process (discarded students are removed by the selection process) [R20205] in any selection phase, the system allows companies to accept a student currently involved in the selection process (accepted students are removed by the selection process) [R20206] the system allows companies to write a personalized message to communicate the result of a selection

Table 3.3: Requirements mapping for goal G3

[G3] ongoing internships can be monitored from the system
[R30101] the system allows students and companies to consult the internships (ongoing or finished) [R30102] the system allows students and companies to report complaints on the internships they are involved in

4 Figures and Tables

4.1 Normal Figures and Tables

Figures and tables can be inserted just like in any standard \LaTeX document. The `graphicx` package is already loaded and configured in such a way that the figure width is equal to the textwidth and the height is adjusted in order to maintain the original aspect ratio. As you may have imagined, the captions will be positioned...well, in the margins. This is achieved with the help of the `floatrow` package.

Here is a picture of Mona Lisa (Figure 4.1), as an example. The captions are formatted as the margin- and the side-notes; If you want to change something about captions you can use the command `\captsetup` from the `caption` package. Remember that if you want to reference a figure, the label must come *after* the caption!

While the format of the caption is managed by `caption`, its position is handled by the `floatrow` package. Achieving this result has been quite hard, but now I am pretty satisfied. In two-side mode, the captions are printed in the correct margin.

Tables can be inserted just as easily as figures, as exemplified by the following code:

```

1 \begin{table}
2 \begin{tabular}{ c c c c }
3   \toprule
4   col1 & col2 & col3 & col 4 \\
5   \midrule
6   \multirow{3}{4em}{Multiple row} & cell2 & cell3 & cell4 \\
7   cell5 & cell6 & cell7 \\
8   cell8 & cell9 & cell10 \\
9   \multirow{3}{4em}{Multiple row} & cell2 & cell3 & cell4 \\
10  cell5 & cell6 & cell7 \\
11  cell8 & cell9 & cell10 \\
12  \bottomrule
13 \end{tabular}
14 \end{table}

```

List-

which results in the useless Table Table 4.1 on the following page.

Table 4.1: A useless table.

col1	col2	col3	col 4
Multiple row	cell2	cell3	cell4
	cell5	cell6	cell7
	cell8	cell9	cell10
Multiple row	cell2	cell3	cell4
	cell5	cell6	cell7
	cell8	cell9	cell10

I don't have much else to say, so I will just insert some blind text. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Figure 4.1: It's Mona Lisa again. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

4.2 Margin Figures and Tables

Marginfigures can be inserted with the environment `marginfigure`. In this case, the whole picture is confined to the margin and the caption is below it. Figure ?? is obtained with something like this:

List-

```
1 \begin{marginfigure}
2   \includegraphics{monalisa}
3   \caption[The Mona Lisa]{The Mona Lisa.}
4   \labfig{marginmonalisa}
5 \end{marginfigure}
```

There is also the `marginfigure` environment, of which Table 4.2 is an example. Notice how you can place the caption above the table by just placing the `\caption` command before beginning the `tabular` environment. Usually, figure captions are below, while table captions are above. This rule is also respected for normal figures and tables: the captions are always on the side, but for figure they are aligned to the bottom, while for tables to the top.

Marginfigures and tables can be positioned with an optional offset command, like so:

```
1 \begin{marginfigure}[offset]
2   \includegraphics{seaside}
3 \end{marginfigure}
```

Offset can be either a measure or a multiple of `\baselineskip`, much like with `\sidenote`, `\marginnote` and `\marginfigure`. If you are wondering how I inserted this orange bubble, have a look at the `todo` package.

Table 4.2:
Another
useless
table.

col1	col2
Multiple row	cell
	cell

4.3 Wide Figures and Tables

With the environments `figure*` and `table*` you can insert figures which span the whole page width. For example, here are a wide figure and a wide table.

Figure 4.2: A wide seaside, and a wide caption. Credits: By Bushra Feroz, CC BY-SA 4.0, <https://commons.wikimedia.org/w/index.php?curid=68724647>

Improve this part.

It is the user's responsibility to adjust the width of the table, if necessary, until it is aesthetically pleasing. The previous table was obtained with the following code:

List-

```
1 \begin{table*}[h!]
```

How to typeset a wide table

Table 4.3: A wide table with invented data about three people living in the UK. Note that wide figures and tables are centered and their caption also extends into the margin.

Name	Surname	Job	Salary	Age	Height	Country
Alice	Red	Writer	4.000 £	34	167 cm	England
Bob	White	Bartender	2.000 £	24	180 cm	Scotland
Drake	Green	Scientist	4.000 £	26	175 cm	Wales

```
2 \caption{A wide table with invented data about three people living in the UK.
3 Note that wide figures and tables are centered and their caption also extends
4 into the margin.}
5 \begin{tabular}{p{2.0cm} p{2.0cm} p{2.0cm} p{2.0cm} p{2.0cm} p{2.0cm} p{1.5cm}}
6 \toprule
7 Name & Surname & Job & Salary & Age & Height &
8 Country \\
9 \midrule
10 Alice & Red & Writer & 4.000 \pounds & 34 & 167 cm &
11 England \\
12 Bob & White & Bartender & 2.000 \pounds & 24 & 180 cm &
Scotland \\
Drake & Green & Scientist & 4.000 \pounds & 26 & 175 cm &
Wales \\
\bottomrule
\end{tabular}
\end{table}
```

The `floatrow` package provides the “H” specifier to instruct \LaTeX to position the figure (or table) in precisely the same position it occupies in the source code. However, this specifier does not work with wide figures or tables: you should use “h!” instead, like so: `\begin{figure*}[h!]`.

You may have noticed the full width image at the very beginning of this chapter: that, however, is set up in an entirely different way, which you’ll read about in Chapter 6 on page 24.

`kaobook` also supports paginated tables (have a look at the `longtable` package). The `longtable`¹ environment behaves a bit differently from `table`, in that `longtable` encompasses both `table` and `tabular`, so that you can write, *e.g.*,

```
1 \begin{longtable}{|l c c|}
2 \hline
3 One & Two & Three \\
4 Left & Center & Center \\
5 \hline
6 \caption{Caption of the longtable.}
7 \end{longtable}
```

to obtain the following table:

One	Two	Three
Left	Center	Center

Table 4.4: Caption of the longtable.

The caption of a `longtable` is always positioned below the table, and it has the same width as the text (it doesn’t extend into the margin). However, sometimes you may need a `longtable` that is so wide that it trespass into the margins; in those cases, you may want to also increase the width of the caption. To do so, you’ll have to write two additional commands, one before and one after the `longtable`:

List-
Inter-
est-
ingly,
`longtables`
may
re-
quire
up
to
four
rounds
of
com-
pi-
la-
tion
be-
fore
they
are

^{set}
cor-
rectly.

```

1 \floatsetup[longtable]{margins=centering,LTcapwidth=table} % Add this line before
   the longtable to increase the caption width
2 \begin{longtable}{lp{8cm}p{5cm}p{2cm}}
3 ...
4 \end{longtable}
5 \floatsetup[longtable]{margins=raggedright,LTcapwidth=\textwidth} % Add this line
   after the longtable to revert the previous change

```

Having seen figures and tables, it is now time to tackle hyperreferences.

cap-
tion
of
a
longtable.

5.1 Citations

To cite someone [Visscher2008, James2013] is very simple: just use the `\sidecite` command. It does not have an offset argument yet, but it probably will in the future. This command supports multiple entries, as you can see, and by default it prints the reference on the margin as well as adding it to the bibliography at the end of the document. Note that the citations have nothing to do with the text, [James2013] but they are completely random as they only serve the purpose to illustrate the feature.

For this setup I wrote a separate package, `kaobiblio`, which you can find in the `styles` directory and include in your main tex file. This package accepts all the options that you can pass to `biblatex`, and actually it passes them to `biblatex` under the hood. Moreover, it also defines some commands, like `\sidecite`, and environments that can be used within a `kaobook`.¹

If you want to use `bibtex` instead of `biblatex`, pass the option `backend=bibtex` to `kaobiblio`. `kaobiblio` also supports two options that are not shared with `biblatex`: `addspace` and `linkeverything`, both of which are boolean options, meaning that they can take either “true” or “false” as a value. If you pass `addspace=true` when loading `kaobiblio`, a space will be automatically added before the citation marks. If you pass `linkeverything=true`, the author’s name in the `authoryear-*` and `authortitle-*` styles will be a hyperlink like the year.²

As you have seen, the `\sidecite` command will print a citation in the margin. However, this command would be useless without a way to customise the format of the citation, so the `kaobook` provides also the `\formatmargincitation` command. By “renewing” that command, you can choose which items will be printed in the margins. The best way to understand how it works is to see the actual definition of this command.

```
\newcommand{\formatmargincitation}[1]{%
  \parencite{#1}: \citeauthor*{#1} (\citeyear{#1}), \citetitle{#1}%
}
```

Thus, the `\formatmargincitation` accepts one parameter, which is the citation key, and prints the `parencite` followed by a colon, then the author, then the year (in brackets), and finally the title. [Battle2014] Now, suppose that you wish the margin citation to display the year and the author, followed by the title, and finally a fixed arbitrary string; you would add to your document:

```
\renewcommand{\formatmargincitation}[1]{%
  \citeyear{#1}, \citeauthor*{#1}: \citetitle{#1}; very interesting!%
}
```

The above code results in citations that look like the following. [Zou2005] Of course, changing the format is most useful when you also change the default bibliography style. For instance, if you want to use the “philosophy-modern” style for your bibliography, you might have something like this in the preamble:

```
\usepackage[style=philosophy-modern]{styles/kaobiblio}
\renewcommand{\formatmargincitation}[1]{%
  \sdcite{#1}%
}
\addbibresource{main.bib}
```

The commands like `\citeyear`, `\parencite` and `\sdcite` are just examples. A full reference of the available commands can be found in this [cheatsheet](#), under the “Citations” section.

Finally, to compile a document containing citations, you need to use an external tool, which for this class is `biber`. You need to run the following (assuming that your tex file is called `main.tex`):

```
$ pdflatex main
$ biber main
$ pdflatex main
```

5.2 Glossaries and Indices

The `kaobook` class loads the packages `glossaries` and `imakeidx`, with which you can add glossaries and indices to your book. For instance, I previously defined some glossary entries and now I am going to use them, like this: `computer`. `glossaries` also allows you to use acronyms, like the following: this is the full version, Frame per Second (FPS), and this is the short one FPS. These entries will appear in the glossary in the backmatter.

Unless you use `Overleaf` or some other fancy IDE for `LaTeX`, you need to run an external command from your terminal in order to compile a document with a glossary. In particular, the commands required are:³

```
$ pdflatex main
$ makeglossaries main
$ pdflatex main
```

Note that you need not run `makeglossaries` every time you compile your document, but only when you change the glossary entries.

To create an index, you need to insert the command `\index{subject}` whenever you are talking about “subject” in the text. For instance, at the start of this paragraph I would write `index{index}`, and an entry would be added to the Index in the backmatter. Check it out!

A nomenclature is just a special kind of index; you can find one at the end of this book. To insert a nomenclature, we use the package `nomencl` and add the terms with the command `\nomenclature`. We put then a `\printnomenclature` where we want it to appear.

Also with this package we need to run an external command to compile the document, otherwise the nomenclature will not appear:

```
$ pdflatex main
$ makeindex main.nlo -s nomencl.ist -o main.nls
$ pdflatex main
```

These packages are all loaded in `packages.sty`, one of the files that come with this class. However, the configuration of the elements is best done in the `main.tex` file, since each book will have different entries and styles.

Note that the `nomencl` package caused problems when the document was compiled, so, to make a long story short, I had to prevent `scrhack` to load the hack-file for `nomencl`. When compiling the document on `Overleaf`, however, this problem seem to vanish.

5.3 Hyperreferences

Together with this class we provide a handy package to help you referencing the same elements always in the same way, for consistency across the book. First, you can label each element with a specific command. For instance, should you want to label a chapter, you would put `\labch{chapter-title}` right after the `\chapter` directive. This is just a convenience, because `\labch` is actually just an alias to `\label{ch:chapter-title}`, so it spares you the writing of “ch:”. We defined similar commands for many typically labeled elements, including:

- Page: `\labpage`
- Part: `\labpart`
- Chapter: `\labch`
- Section: `\labsec`
- Figure: `\labfig`
- Table: `\labtab`
- Definition: `\labdef`
- Assumption: `\labassum`

- Theorem: `\labthm`
- Proposition: `\labprop`
- Lemma: `\lablemma`

- Remark: `\labremark`
- Example: `\labexample`
- Exercise: `\labexercise`

3:
These
are
the
com-

Of course, we have similar commands for referencing those elements. However, since the style of the reference should depend on the context, we provide different commands to reference the same thing. For instance, in some occasions you may want to reference the chapter by name, but other times you want to reference it only by number. In general, there are four reference style, which we call plain, vario, name, and full.

The plain style references only by number. It is accessed, for chapters, with `\refch{chapter-title}` (for other elements, the syntax is analogous). Such a reference results in: Chapter 5.

The vario and name styles rest upon the `varioref` package. Their syntax is `\vrefch{chapter-title}` and `\nrefch{chapter-title}`, and they result in: Chapter 5 on page 19, for the vario style, and: Chapter 5 (References), for the name style. As you can see, the page is referenced in `varioref` style.

The full style references everything. You can use it with `\frefch{chapter-title}` and it looks like this: Chapter 5 (References) on page 19.

Of course, all the other elements have similar commands (*e.g.* for parts you would use `\vrefpart{part-title}` or something like that). However, not all elements implement all the four styles. The commands provided should be enough, but if you want to see what is available or to add the missing ones, have a look at the [attached package](#).

In order to have access to all these features, the `kaorefs` should be loaded in the preamble of your document. It should be loaded last, or at least after `babel` (or `polyglossia`) and `plaintheorems` (or `mdftheorems`). Options can be passed to it like to any other package; in particular, it is possible to specify the language of the captions. For instance, if you specify “italian” as an option, instead of “Chapter” it will be printed “Capitolo”, the Italian analog. If you know other languages, you are welcome to contribute the translations of these captions! Feel free to contact the author of the class for further details.

The `kaorefs` package also include `cleveref`, so it is possible to use `\cref` in addition to all the previously described referencing commands.

5.4 A Final Note on Compilation

Probably the easiest way to compile a latex document is with the `latexmk` script, as it can take care of everything, if properly configured, from the bibliography to the glossary. The command to issue, in general, is:

```
1 | latexmk [latexmk_options] [filename ...]
```

`latexmk` can be extensively configured (see <https://mg.readthedocs.io/latexmk.html>). For convenience, I print here an example configuration that would cover all the steps described above.

```
1 | # By default compile only the file called 'main.tex'
2 | @default_files = ('main.tex');
3 |
4 | # Compile the glossary and acronyms list (package 'glossaries')
5 | add_cus_dep( 'acn', 'acr', 0, 'makeglossaries' );
6 | add_cus_dep( 'glo', 'gls', 0, 'makeglossaries' );
7 | $clean_ext .= " acr acn alg glo gls glg";
8 | sub makeglossaries {
9 |     my ($base_name, $path) = fileparse( $_[0] );
10 |     pushd $path;
11 |     my $return = system "makeglossaries", $base_name;
12 |     popd;
13 |     return $return;
14 | }
```

15 |
16 | # Compile the nomenclature (package 'nomencl')
17 | add_cus_dep( 'nlo', 'nls', 0, 'makenlo2nls' );
18 | sub makenlo2nls {
19 |     system( "makeindex -s nomencl.ist -o \"$_[0].nls\" \"$_[0].nlo\"" );
20 | }

```

However, if you'd rather not use an external package and want to do everything manually, here are some tips.⁴

Compiling the examples in the kaobook repository

To compile the examples, and in particular the documentation, that are in the `examples` directory of the [kaobook repository](#) on GitHub, do as follows. `cd` into the root directory of the repository, and run `pdflatex -output-directory examples /documentation main.tex`. With this trick, you can compile the documentation using the class files pertaining to the repository (and not, say, those in your `texmf` tree). The “-output-directory” option works with the other \LaTeX -related commands such as `biber` and `makeglossaries`.

A note of warning: sometimes \LaTeX needs more than one run to get the correct position of each element; this is true in particular for the positioning of floating elements like figures, tables, and margin notes. Occasionally, \LaTeX can need up to four re-runs, so if the alignment of margin elements looks odd, or if they bleed into the main text, try running `pdflatex` one more time.

Design and Additional Features

6 Page Design

6.1 Headings

So far, in this document I used two different styles for the chapter headings: one has the chapter name, a rule and, in the margin, the chapter number; the other has an image at the top of the page, and the chapter title is printed in a box (like this chapter). There is one additional style, which I used only in the Chapter 7.3 (Appendix); there, the chapter title is enclosed in two horizontal rules, and the chapter number (or letter, in the case of the appendix) is above it.¹

Every book is unique, so it makes sense to have different styles from which to choose. Actually, it would be awesome if whenever a kao-user designs a new heading style, he or she added it to the three styles already present, so that it will be available for new users and new books.

The choice of the style is made simple by the `\setchapterstyle` command. It accepts one option, the name of the style, which can be: “plain”, “kao”, “bar”, or “lines”.² If instead you want the image style, you have to use the command `\setchapterimage`, which accepts the path to the image as argument; you can also provide an optional parameter in square brackets to specify the height of the image. `\setchapterimage` automatically sets the chapter style to “bar” for that chapter (and also for subsequent chapters).

Let us make some examples. In this book, I begin a normal chapter with the lines:

```
1 \setchapterstyle{kao}
2 \setchapterpreamble[u]{\margintoc}
3 \chapter{Title of the Chapter}
4 \labch{title}
```

In Line 1 I choose the style for the title to be “kao”. Then, I specify that I want the margin toc. The rest is ordinary administration in \LaTeX , except that I use my own `\labch` to label the chapter. Actually, the `\setchapterpreamble` is a standard KOMA-Script one, so I invite you to read about it in the KOMA documentation. Once the chapter style is set, it holds until you change it.³ Whenever I want to start a chapter with an image, I simply write:

```
1 \setchapterimage[7cm]{path/to/image.png} % Optionally specify the height
2 \setchapterpreamble[u]{\margintoc}
3 \chapter{Catchy Title} % No need to set a chapter style
4 \labch{catchy}
```

If you prefer, you can also specify the style at the beginning of the main document, and that style will hold until you change it again.

6.2 Headers & Footers

Headers and footers in KOMA-Script are handled by the `scrlayer-scrpage` package. There are two basic styles: “`scrheadings`” and “`plain.scrheadings`”. The former is used for normal pages, whereas the latter is used in title pages (those to where a new chapter starts, for instance) and, at least in this book, in the front matter. At any rate, the style can be changed with the `\pagestyle` command, *e.g.* `\pagestyle{plain.scrheadings}`.

In both styles, the footer is completely empty. In `plain.scrheadings`, also the header is absent (otherwise it wouldn’t be so plain...), but in the normal style the design is reminiscent of the “`kao`” style for chapter titles.

To Do

The `twoside` class option is still unstable and may lead to unexpected behaviours. As always, any help will be greatly appreciated.

6.3 Table of Contents

Another important part of a book is the table of contents. By default, in `kaobook` there is an entry for everything: list of figures, list of tables, bibliographies, and even the table of contents itself. Not everybody might like this, so we will provide a description of the changes you need to do in order to enable or disable each of these entries. In the following Table 6.1, each item corresponds to a possible entry in the TOC, and its description is the command you need to provide to have such an entry. These commands are specified in the attached `style package`,⁴ so if you don’t want the entries, just comment the corresponding lines.

Of course, some packages, like those for glossaries and indices, will try to add their own entries. In such cases, you have to follow the instructions specific to that package. Here, since we have talked about glossaries and notations in Chapter 5, we will briefly see how to configure them.

For the `glossaries` package, use the “`toc`” option when you load it: `\usepackage[toc]{glossaries}`. For `nomencl`, pass the “`intoc`” option at the moment of loading the package. Both `glossaries` and `nomencl` are loaded in the attached “`packages`” package.

Additional configuration of the table of contents can be performed through the packages `etoc`, which is loaded because it is needed for the `margintocs`, or the more traditional `tocbase`. Read the respective documentations if you want to be able to change the default TOC style.⁵

Table 6.1: Commands to add a particular entry to the table of contents.

Entry	Command to Activate
Table of Contents	<code>\setuptoc{toc}{totoc}</code>
List of Figs and Tabs	<code>\PassOptionsToClass{toc=listof}{\@baseclass}</code>
Bibliography	<code>\PassOptionsToClass{toc=bibliography}{\@baseclass}</code>

6.4 Paper Size

Recent versions of Kaobook support paper sizes different from the default A4. It is possible to pass the name of the paper as an option to the class, as we are accustomed for any other L^AT_EX class. For example, the class option `b5paper` would set the paper size to the B5 format.

We also support the paper sizes specified in [this web page](#) and some additional sizes requested by the users, with the option names specified in Table 6.2.

For instance, to use the “smallpocketpaper” add the correct description at the beginning of the documentclass instruction:

```
1 \documentclass [
2     smallpocketpaper ,
3     fontsize=10pt ,
4     twoside=false ,
5     %open=any ,
6     secnumdepth=1 ,
7 ]{kaobook}
```

14.8cm x 21.0cm	a5paper
15.5cm x 22.0cm	juvenilepaper
17.0cm x 17.0cm	smallphotopaper
21.0cm x 15.0cm	appendixpaper
17.0cm x 22.0cm	cookpaper
19.0cm x 27.0cm	illustratedpaper
17.0cm x 17.0cm	photopaper
16.0cm x 24.0cm	f24paper

6.5 Page Layout

Besides the page style, you can also change the width of the content of a page. This is particularly useful for pages dedicated to part titles, where having the 1.5-column layout might be a little awkward, or for pages where you only put figures, where it is important to exploit all the available space.

In practice, there are two layouts: “wide” and “margin”. The former suppresses the margins and allocates the full page for contents, while the latter is the layout used in most of the pages of this book, including this one. The wide layout is also used automatically in the front and back matters.

To change page layout, use the `\pagelayout` command. For example, when I start a new part, I write:

```
1 \pagelayout{wide}
2 \addpart{Title of the New Part}
3 \pagelayout{margin}
```

Beyond these two basic layouts, it is also possible to finely tune the page layout by redefining the `\marginlayout` command. This command is called internally by the higher-level `\pagelayout`, and it is responsible for setting the width of the margins and of the text. The default definition is:

```
1 \newcommand{\marginlayout}{%
2     \newgeometry{
3         top=27.4mm,           % height of the top margin
4         bottom=27.4mm,       % height of the bottom margin
5         inner=24.8mm,         % width of the inner margin
6         textwidth=107mm,      % width of the text
7         marginparsep=8.2mm,   % width between text and margin
8         marginparwidth=49.4mm, % width of the margin
9     }%
10 }
```

so if you want to, say, decrease the width of the margin while increasing the width of the text, you could write in the preamble of your document something like:

```
1 \renewcommand{\marginlayout}{%
2     \newgeometry{
3         top=27.4mm,           % height of the top margin
4         bottom=27.4mm,       % height of the bottom margin
5         inner=24.8mm,         % width of the inner margin
6         textwidth=117mm,      % width of the text
```

```

7      marginparsep=8.2mm,      % width between text and margin
8      marginparwidth=39.4mm,   % width of the margin
9  }%
10 }

```

where the text width has been increased by 10mm and the margin width has been decreased by 10mm.

6.6 Numbers & Counters

In this short section we shall see how dispositions, sidenotes and figures are numbered in the `kaobook` class.

By default, dispositions are numbered up to the section in `kaobook` and up to the subsection in `kaohandt`. This can be changed by passing the option `secnumdepth` to `kaobook` or `kaohandt` (e.g. 1 corresponds to section and 2 corresponds to subsections).

The sidenotes counter is the same across all the document, but if you want it to reset at each chapter, just uncomment the line

```
\counterwithin*{sidenote}{chapter}
```

in the `styles/style.sty` package provided by this class.

Figure and Table numbering is also per-chapter; to change that, use something like:

```
\renewcommand{\thefigure}{\arabic{section}.\arabic{figure}}
```

6.7 White Space

One of the things that I find most hard in \LaTeX is to finely tune the white space around objects. There are not fixed rules, each object needs its own adjustment. Here we shall see how some spaces are defined at the moment in this class.

Space around sidenotes and citations marks

There should be no space before or after sidenotes and citation marks, like so:

```
sidenote6sidenote
citation[James2013]citation
```

Space around figures and tables

```
\renewcommand\FBaskip{.4\topskip}
\renewcommand\FBbskip{\FBaskip}
```

Space around captions

```
\captionsetup{
  aboveskip=6pt,
  belowskip=6pt
}
```

Space around displays (*e.g.* equations)

```
\setlength\abovedisplayskip{6pt plus 2pt minus 4pt}
\setlength\belowdisplayskip{6pt plus 2pt minus 4pt}
\abovedisplayskip 10\p@ \@plus2\p@ \@minus5\p@
\abovedisplayshortskip \z@ \@plus3\p@
\belowdisplayskip \abovedisplayskip
\belowdisplayshortskip 6\p@ \@plus3\p@ \@minus3\p@
```

Sometimes it is desirable to increase the width for just one or a few paragraphs; the `widexpar` environment does that: wrap your paragraphs in this environment, and they will occupy the full width of the page. Attention! This section may be incomplete.

7.1 Theorems

Despite most people complain at the sight of a book full of equations, mathematics is an important part of many books. Here, we shall illustrate some of the possibilities. We believe that theorems, definitions, remarks and examples should be emphasised with a shaded background; however, the colour should not be too heavy on the eyes, so we have chosen a sort of light yellow.¹

Definition 7.1.1 *Let (X, d) be a metric space. A subset $U \subset X$ is an open set if, for any $x \in U$ there exists $r > 0$ such that $B(x, r) \subset U$. We call the topology associated to d the set τ_d of all the open subsets of (X, d) .*

Definition 7.1.1 is very important. I am not joking, but I have inserted this phrase only to show how to reference definitions. The following statement is repeated over and over in different environments.

Theorem 7.1.1 *A finite intersection of open sets of (X, d) is an open set of (X, d) , i.e. τ_d is closed under finite intersections. Any union of open sets of (X, d) is an open set of (X, d) .*

Proposition 7.1.2 *A finite intersection of open sets of (X, d) is an open set of (X, d) , i.e. τ_d is closed under finite intersections. Any union of open sets of (X, d) is an open set of (X, d) .*

Lemma 7.1.3 *A finite intersection^a of open sets of (X, d) is an open set of (X, d) , i.e. τ_d is closed under finite intersections. Any union of open sets of (X, d) is an open set of (X, d) .*

^a I'm a footnote

You can safely ignore the content of the theorems...I assume that if you are interested in having theorems in your book, you already know something about the classical way to add them. These examples should just showcase all the things you can do within this class.

Corollary 7.1.4 (Finite Intersection, Countable Union) *A finite intersection of open sets of (X, d) is an open set of (X, d) , i.e. τ_d is closed under finite intersections. Any union of open sets of (X, d) is an open set of (X, d) .*

Proof. The proof is left to the reader as a trivial exercise. Hint: Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language. \square

Definition 7.1.2 *Let (X, d) be a metric space. A subset $U \subset X$ is an open set if, for any $x \in U$ there exists $r > 0$ such that $B(x, r) \subset U$. We call the topology associated to d the set τ_d of all the open subsets of (X, d) .*

Example 7.1.1 *Let (X, d) be a metric space. A subset $U \subset X$ is an open set if, for any $x \in U$ there exists $r > 0$ such that $B(x, r) \subset U$. We call the topology associated to d the set τ_d of all the open subsets of (X, d) .*

Remark 7.1.1 Let (X, d) be a metric space. A subset $U \subset X$ is an open set if, for any $x \in U$ there exists $r > 0$ such that $B(x, r) \subset U$. We call the topology associated to d the set τ_d of all the open subsets of (X, d) .

As you may have noticed, definitions, example and remarks have independent counters; theorems, propositions, lemmas and corollaries share the same counter.

Remark 7.1.2 Here is how an integral looks like inline: $\int_a^b x^2 dx$, and here is the same integral displayed in its own paragraph:

$$\int_a^b x^2 dx$$

There is also an environment for exercises.

Exercise 7.1.1 Prove (or disprove) the Riemann hypothesis.

We provide one package for the theorem styles: `kaothorems.sty`, to which you can pass the `framed` option you do want to look like Harlequin. You may want to edit this files according to your taste and the general style of the book. However, there is an option to customise the background colour of the boxes if you use the `framed` option: when you load this package, you can pass it the `background=mycolour` option (replace “mycolour” with the actual colour, for instance, “red!35!white”). This will change the colour of all the boxes, but it is also possible to can even insert change the colour only for some elements. For instance, the `propositionbackground=mycolour` option will insert change the colour for propositions only. There are similar options for theorem, definition, lemma, corollary, remark, and example.

7.2 Boxes & Custom Environments ³

Say you want to insert a special section, an optional content or just something you want to emphasise. We think that nothing works better than a box in these cases. We used `mdframed` to construct the ones shown below. You can create and modify such environments by editing the provided file `environments.sty`.

Title of the box

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

If you set up a counter, you can even create your own numbered environment.

Comment 7.2.1

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

we achieved this with the optional argument

7.3 Experiments

It is possible to wrap marginnotes inside boxes, too. Audacious readers are encouraged to try their own experiments and let me know the outcomes.

I believe that many other special things are possible with the `kaobook` class. During its development, I struggled to keep it as flexible as possible, so that new features could be added without too great an effort. Therefore, I hope that you can find the optimal way to express yourselves in writing a book, report or thesis with this class, and I am eager to see the outcomes of any experiment that you may try.

low
boxes.

Appendix

Heading on Level 0 (chapter)

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

A.1 Heading on Level 1 (section)

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

A.1.1 Heading on Level 2 (subsection)

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Heading on Level 3 (subsubsection)

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Heading on Level 4 (paragraph) Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

A.2 Lists

A.2.1 Example for list (itemize)

- ▶ First item in a list
- ▶ Second item in a list
- ▶ Third item in a list
- ▶ Fourth item in a list
- ▶ Fifth item in a list

Example for list (4*itemize)

- ▶ First item in a list
 - First item in a list
 - * First item in a list
 - First item in a list
 - Second item in a list
 - * Second item in a list
 - Second item in a list
- ▶ Second item in a list

A.2.2 Example for list (enumerate)

1. First item in a list
2. Second item in a list
3. Third item in a list
4. Fourth item in a list
5. Fifth item in a list

Example for list (4*enumerate)

1. First item in a list
 - a) First item in a list
 - i. First item in a list
 - A. First item in a list
 - B. Second item in a list
 - ii. Second item in a list
 - b) Second item in a list
2. Second item in a list

A.2.3 Example for list (description)

First item in a list
Second item in a list
Third item in a list
Fourth item in a list
Fifth item in a list

Example for list (4*description)

First item in a list

First item in a list
